

Plant Disease Diagnosis Report

User: Guest

Plant: Corn (maize)

Disease: Northern Leaf Blight

Confidence: 84.06%

Prediction Time: 0.14 sec

Severity: Unknown

Weather Information

Temperature : 28.9 °C

Humidity : 68 %

Wind Speed : 5.8 km/h

Description

Northern Leaf Blight is a fungal disease affecting maize leaves.

Symptoms

Long cigar-shaped gray-green lesions that turn brown.

Treatment

Apply fungicides and remove infected plant debris.

Prevention

Rotate crops, use resistant hybrids, and avoid excessive leaf wetness.
